AN ODE TO GTECH

BY GAVIN WHITE

GTECH has grown but continues to play.

How it got started? Well, let us just say-

A CMU robot

Worked on the first lot

About ten years ago today.

On a brownfield and elsewhere in 2008,

Sunflowers helped to demonstrate

That plants aren't just pretty-

They do work that's gritty.

They feed, they fuel and they remediate.

In 2009, GTECH's focus had been

A healthy economy with jobs not yet seen,

So youth got connected,

And their jobs intersected

Community projects with all things green.

For the new decade, GTECH had a fresh plan.

With it enacted, some real growth began.

Still at home in the Junction,

Exploring waste oil's function,

The team just kept turning 'can't' into 'can.'

2011 was a year of collaborations.

Shared services led to inspired creations-

Like Larimer Garden, today still there

(That's pronounced like 'car'- not like 'care')

And a shared CFO for Fiscal Administration.

2012 was especially full

And a strategic plan was the primary tool

To reorganize

And categorize

Into ReClaim, ReEnergize, and ReFuel.

Investigate, Act, Connect, Sustain,

Our methodology, and 2013's refrain,

Meant more data collection

And social connection

That led to sustainable, community gain.

Our Ambassadors made 2014 a blast.

They designed and implemented projects quite fast.

From South to McKeesport

And back to the North,

The program, now solid, was ready to last.

In 2015, we began making Green

(Playces, that is, with kids and with teens).

Whether flat or on hills

GTECH projects build skills

And inspire communities to make playces routine.

Last year was more than a bit bittersweet.

Our founder (who's last name means 'seller of meat')

Left us, but with the presumption:

GTECH still had its gumption,

Plus a new ED, and a mission not yet complete.
